Trading Pair: USD-JPY only (!). This is the critical point. All settings, TPs and steps were defined after close research of dynamic of USD\JPY movement for last 10 years. If you will change any value, we cannot guarantee such performance and safeness.

Timeframe: does not matter.

Money Management:

Account size: $ 25 000
Leverage: 1:200, 1:400, 1:500
Lotsize: 0.01 (microlot)

Account size: $ 50 000
Leverage: 1:100
Lotsize: 0.01 (microlot)

Account size: $ 2500
Leverage: 1:200, 1:400, 1:500
Lotsize: 0.001 (nanolot IBFX)

Performance:

0.1 lots generates 120-150K monthly
0.01 lots generates 12-15K monthly
0.001 lots generates 1,2-1,5K monthly

Backtests:

2008 backtest showed growth from **30K to 201K** with fixed starting lotsize. Another backtest was made with compounding option (0.01 per each 30K) and showed growth from **30K to 4M+** ...It's just backtests, remember.

We backtest new ideas during 2008 mostly, because 2008 year had some extreme days for the strategy (March trend, October trend and November trend) which I think is enough to see all market condition we may see.

Live accounts:

We started to trade this model from 10th of Feb with account of $ 24 400. Total profit till now grew to **$ 32 624 which is 133,7 % for 2 months**.

EA settings:

There is no need to change any settings, but just apply EA to proper MM. EA will not trade if you will set low lotsize or deposit. You will get warning alerts and no trades will be set.
